

eToken Request Form

The eToken is the University of Toronto's official solution for 2-factor authentication, replacing the previous SecurID system. The eToken login is the first step in the user authentication process for many UofT applications. An eToken is a USB key that plugs into a USB port on a computer (PC or Mac), and holds a security certificate which uniquely identifies an individual. Using eToken authentication requires that the user be issued an eToken and that eToken software be installed on the computer.

On behalf of central Information Technology Services (ITS), Discovery Commons will issue eTokens and install eToken software in the Faculty of Medicine.

All the information requested below is required. The information should describe an individual and not a departmental role. The Discovery Commons will contact you when the eToken is ready for pickup. Please scan and send this completed and signed form to discovery.common@utoronto.ca.

First Name: _____ Last Name: _____

UTORid: _____ Department: _____

User email: _____ User Phone #: _____

Address: _____ Room Number: _____

User Signature: _____ Date: _____

Department/Division/ Institute Business

Officer Name: _____

Business

Officer Signature: _____ Date: _____
